

Poll Platform

User Manual

This is a web application that provides users a platform to launch polls, as well as fill out polls launched by other users. Filling out polls earns user points; publishing polls costs user points. The point accumulative system ensures that information exchange can be effective and long-lasting.

The poll platform is data-access friendly. The database inside the platform keeps track of ratings and provides users a good visualization of poll results by displaying histogram charts, average rating, highest and lowest ratings, and other statistical data, etc.

What is more, the platform also supports functions such as recommending potential polls that users may be interested in, filtering polls by publishing time, tags and more.
